

# Immunizations In Warren County

There are 14 vaccines that protect children and teens from disease

Depending on age and other risk factors there are a number of vaccines adults should consider.

1 out of 5 Warren County children 24-35 mths. old don't meet current vaccine recommendations

Only 37% of 13 yr. olds in Warren County are up-to-date with the HPV vaccine which prevents certain cancers.

Some adult vaccines like flu are yearly. Other vaccines you only need once. Check with your doctor to see if you are due for any vaccines.

Vaccines are safe and effective. Talk with your child's pediatrician about vaccines and how to keep your child safe.

then

Talk with your doctor about any vaccines you should consider.
